## CRYPISIS Lighting

**Crypsis lighting is an exciting new product available from Totally Glass.**

The Crypsis lighting system offers users the ability to move LED lights by hand and reposition them wirelessly anywhere within the glass panel.

The system uses no batteries or direct wiring and therefore opens up a freedom in commercial and domestic lighting

Crypsis glass panels are double-layered sealed glass units with an overall thickness of 26mm (with standard 4mm glass). The panels are assembled with an optically clear extruded polymer support frame.

Once the system is assembled the internal light units can be moved to any area of the glass panel with the external glass puck. Light units will maintain illumination in motion, and when static to allow for precise lighting effects.

If several objects are being illuminated from the same panel, light units can be positioned and dimmed at different intensities. Light units can also be inverted, to project light from both sides of the panel.

Totally Glass can incorporate Crypsis Lighting into many of their products including shelving, showcases and light walls.
